Objective

I would like to build up experience to one day become a Senior Developer being able to manipulate many software with a professional touch.

Work Experience

IT Technician

dMS

15 Elizabeth road, Walkerville, Drumblade
Mar 2017 / In progress

I have come into contact with the Internet of Things, specifically Raspberry Pi and java web-based applications (Not the development thereof). I have practical knowledge concerning 5v-24v Pi GPIO usage. The boss has mentored me substantially. I basically work as a contractor, so working with clients and respecting their time is just a part of it.

Education

BSc Information Technology

NWU Vanderbijlpark
2020

Started education in 2015. 2017-2018 I had taken a study retreat working full-time. Since my return my marks have averaged significantly higher. During my time I have written an android app that used web sockets (had my mentor help on this) to connect to a MySQL database, the app being a food ordering system.
